QURE.AI / INDIA LIFE SCIENCES BUSINESS DEVELOPMENT

CRM onboarding
The full operating guide

A detailed, evidence-first system for turning India life sciences research into coverage, credible conversations, and measurable next actions.

WHAT THIS CRM IS
A shared decision system - not an address book. It records account hypotheses, public professional roles, opportunity logic, activity outcomes, and source evidence.

THE DISCIPLINE
Every priority record needs a source, a clear verification status, an owner, and a dated next action. Unknown is acceptable; invented data is not.

THE RESULT
Use the dashboard to focus, the sheets to preserve context, and the activity log to make each relationship move traceable and repeatable.

01 / THE MENTAL MODEL

One signal. One hypothesis. One next move.

The CRM works as a closed loop: research creates an account hypothesis; contacts make the stakeholder map real; an opportunity tests commercial relevance; activity records the proof and the next decision.

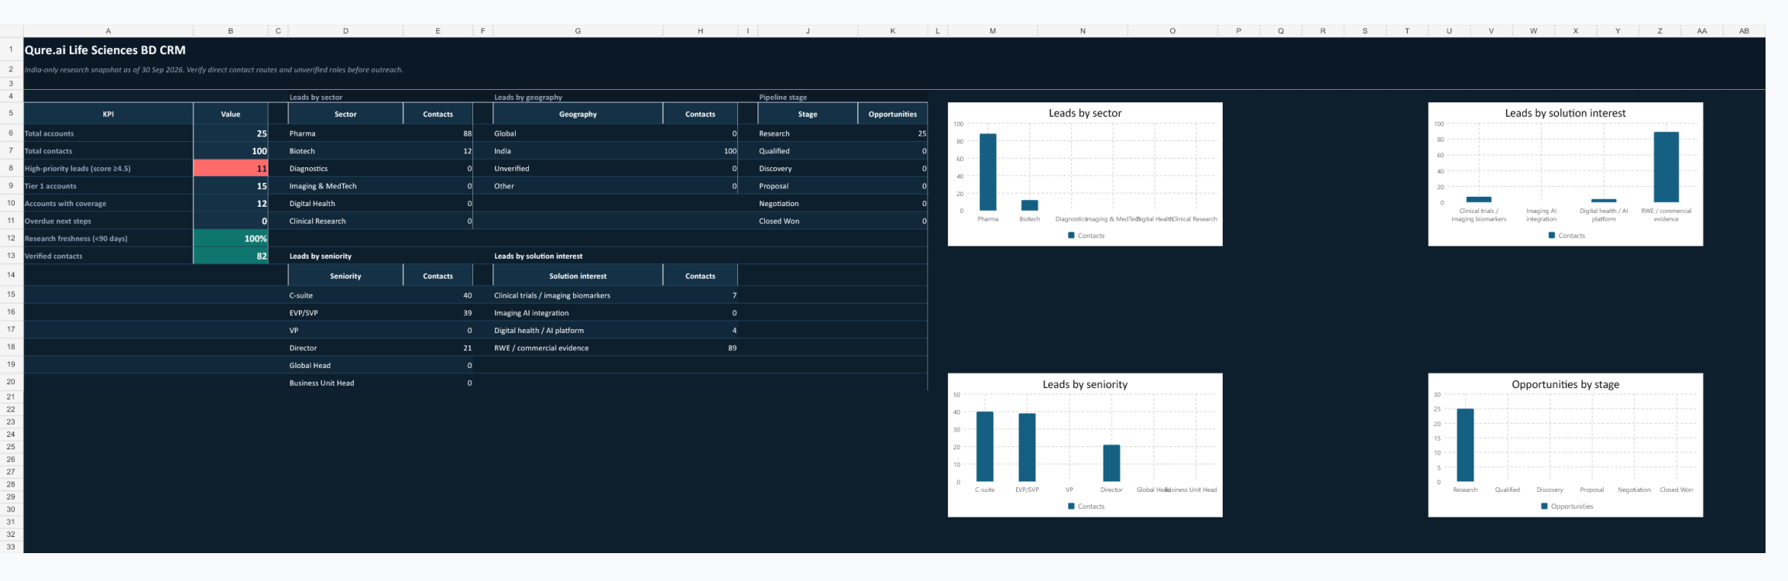
1. **DASHBOARD** Find the work that matters.
2. **ACCOUNT** State why Qure.ai should play.
3. **CONTACT** Map who can influence the decision.
4. **OPPORTUNITY** Test the use case and deal path.
5. **ACTIVITY** Log outcome and set the next move.

THE NON-NEGOTIABLE RULE
Do not begin generic outreach from an incomplete record. First establish the account thesis, decision-maker coverage, evidence source, and a reason that the timing is useful.

02 / DASHBOARD

Start here: find the highest-value work

The dashboard is the work queue. It rolls up accounts, contacts, stages, coverage, freshness, and next-action deadlines so that attention follows evidence instead of noise.



Qure.ai Life Sciences BD CRM

India-only research snapshot as of 30 Sep 2026. Verify direct contact routes and unverified roles before outreach.

KPI	Value
Total accounts	25
Total contacts	100
High-priority leads (score ≥4.5)	11
Tier 1 accounts	15
Accounts with coverage	12
Overdue next steps	0
Research freshness (<90 days)	100%
Verified contacts	82

Leads by sector

Sector	Contacts
Pharma	88
Biotech	12
Diagnostics	0
Imaging & MedTech	0
Digital Health	0
Clinical Research	0

Leads by geography

Geography	Contacts
Global	0
India	100
Unverified	0
Other	0

Pipeline stage

Stage	Opportunities
Research	25
Qualified	0
Discovery	0
Proposal	0
Negotiation	0
Closed Won	0

Leads by seniority

Seniority	Contacts
C-suite	40
EVP/SVP	39
VP	0
Director	21
Global Head	0
Business Unit Head	0

Leads by solution interest

Solution interest	Contacts
Clinical trials / imaging biomarkers	7
Imaging AI integration	0
Digital health / AI platform	4
RWE / commercial evidence	89

Dashboard: use filters, KPI cards, and distributions to choose the next account or research task.

READ THE KPI STACK
1. Total accounts and contacts: scope.
2. High-priority leads: who merits tailored time.
3. Accounts with coverage: whether a target has mapped decision-makers.
4. Freshness: whether the data is safe to act on.

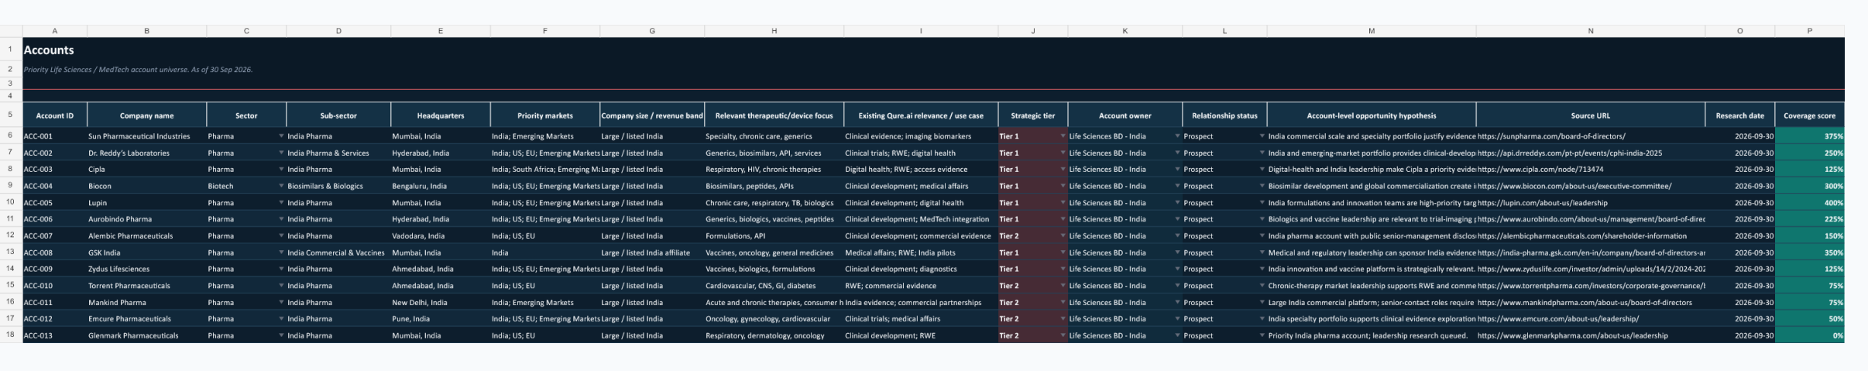
TURN SIGNAL INTO ACTION
If a Tier 1 account has zero coverage, research comes before outreach. If a lead scores 4.5+, draft a role-specific concept. If research is stale, refresh the source before using the title or role.

EXAMPLE INSIGHT: PORTFOLIO GAP
If pharma contains most contacts while diagnostics or imaging has few mapped leaders, the conclusion is not "we have enough leads." Create a focused sourcing task: identify one clinical/diagnostics leader, one digital or innovation leader, and one commercial sponsor for each priority gap.

03 / ACCOUNTS

Build an account thesis before you build outreach

The Accounts sheet turns a company name into an intentional point of view: why this organization matters, what Qure.ai could help solve, who owns the relationship, and what needs to happen next.



Accounts

Priority Life Sciences / MedTech account universe. As of 30 Sep 2026.

Accounts: tier, market relevance, strategic hypothesis, owner, relationship status, source URL, research date, and coverage score.

TIER WITH INTENT
Tier 1 means focused time, not simply company size. A Tier 1 account should have a named owner, a credible Qure.ai use case, senior coverage, and a next action.

WRITE THE HYPOTHESIS
Use one testable sentence: "Qure.ai may help [account] improve [clinical, evidence, imaging, diagnostic, or integration outcome] through [specific pathway]."

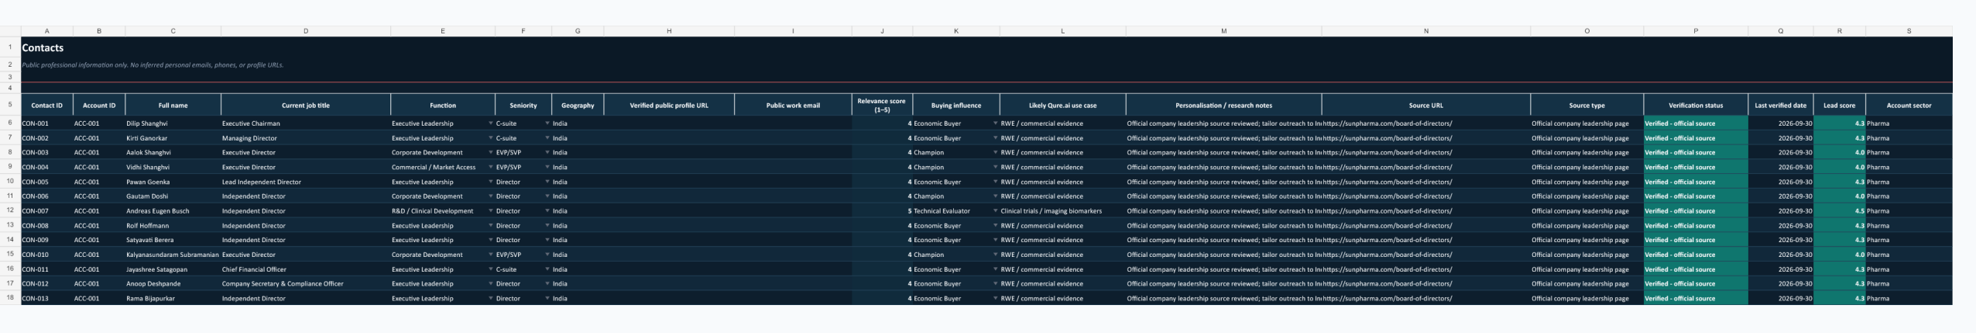
COVERAGE IS A RISK SIGNAL
Low coverage does not mean low value. It means insufficient stakeholder context. Research is the action; generic messages are not.

ACCOUNT QUALITY CHECKLIST
Before treating an account as active: confirm sector/sub-sector and India relevance; set Tier 1, 2, or 3; write a source-backed use-case hypothesis; assign an account owner; add a source URL and date; map at least one senior contact for Tier 1.

04 / CONTACTS

Turn public roles into a stakeholder map

Contacts are research-backed professional records, not personal-data profiles. They explain what conversation to have, who can mobilize support, and whose information must be verified again.



Contacts

Public professional information only. No inferred personal emails, phones, or profile URLs.

Contact ID	Account ID	Full name	Current job title	Function	Seniority	Geography	Verified public profile URL	Public work email	Relevance score (1–5)	Buying influence	Likely Qure.ai use case	Personalisation / research notes	Source URL	Source type	Verification status	Last verified date	Lead score	Account sector

Contacts: title, function, seniority, geography, influence, use case, source, verification status, last-verified date, and lead score.

FUNCTION + SENIORITY
Function shapes the conversation. Seniority helps prioritize the role in a buying process. Use Director, VP, SVP, C-suite, Global Head, or BU Head when verified.

BUYING INFLUENCE
Economic buyer: authorizes budget. Champion: mobilizes support. Technical evaluator: tests fit. End user: uses it. Blocker: needs risk resolution early.

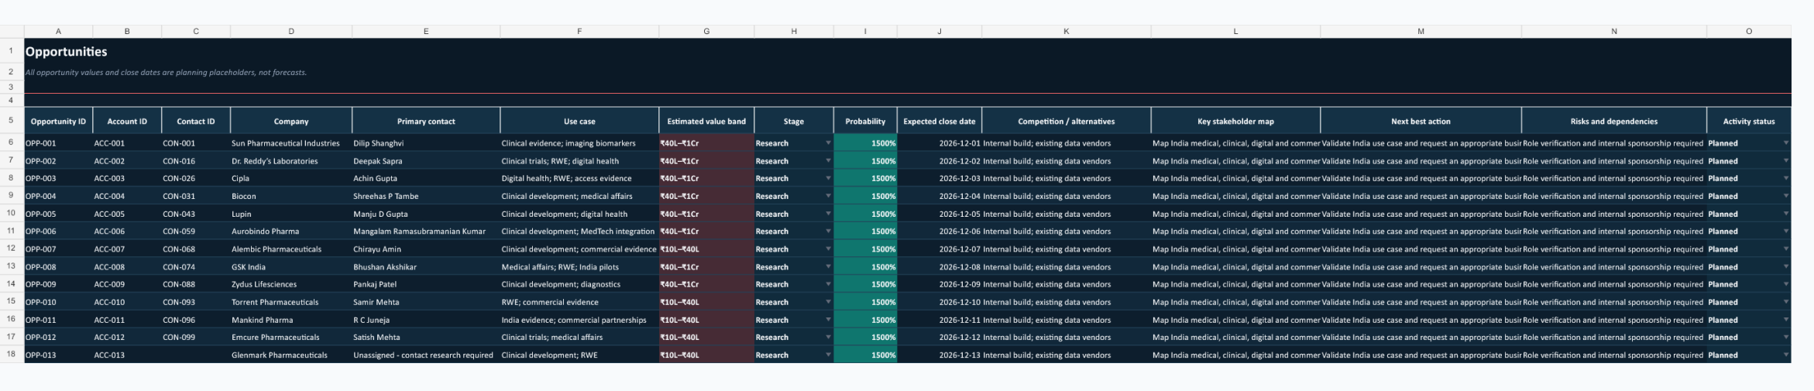
LEAD SCORE
Score relevance and influence to decide where to spend research and personalization time. A high score is a prompt to tailor; it is never permission to send a generic pitch.

VERIFICATION AND SAFE HANDLING
Use a public professional profile only where verified. Capture a work email only if explicitly published by the organization. Never infer email patterns, phone numbers, LinkedIn URLs, or job titles. Record source URL, source type, verification status, and last verified date.

05 / OPPORTUNITIES

Make the commercial hypothesis testable

Create an opportunity once a credible use case emerges. The opportunity is not a promise of revenue; it is a shared re stop progress.



Opportunities

All opportunity values and close dates are planning placeholders, not forecasts.

Opportunity ID	Account ID	Contact ID	Company	Primary contact	Use case	Estimated value band	Stage	Probability	Expected close date	Competition / alternatives	Key stakeholder map	Next best action	Risks and dependencies	Activity status

Opportunities: account/contact link, use case, value band, stage, probability, expected close, stakeholders, risks, and next best action.

USE-CASE MENU
Clinical trials, real-world evidence, imaging biomarkers, diagnostics workflow, MedTech integration, medical affairs evidence, radiology workflow, or commercial partnership.

STAGE DISCIPLINE
Research -> Qualified -> Discovery -> Solution fit -> Proposal -> Negotiation -> Closed. Advance only when the stakeholder, use case, and next evidence gate are clear.

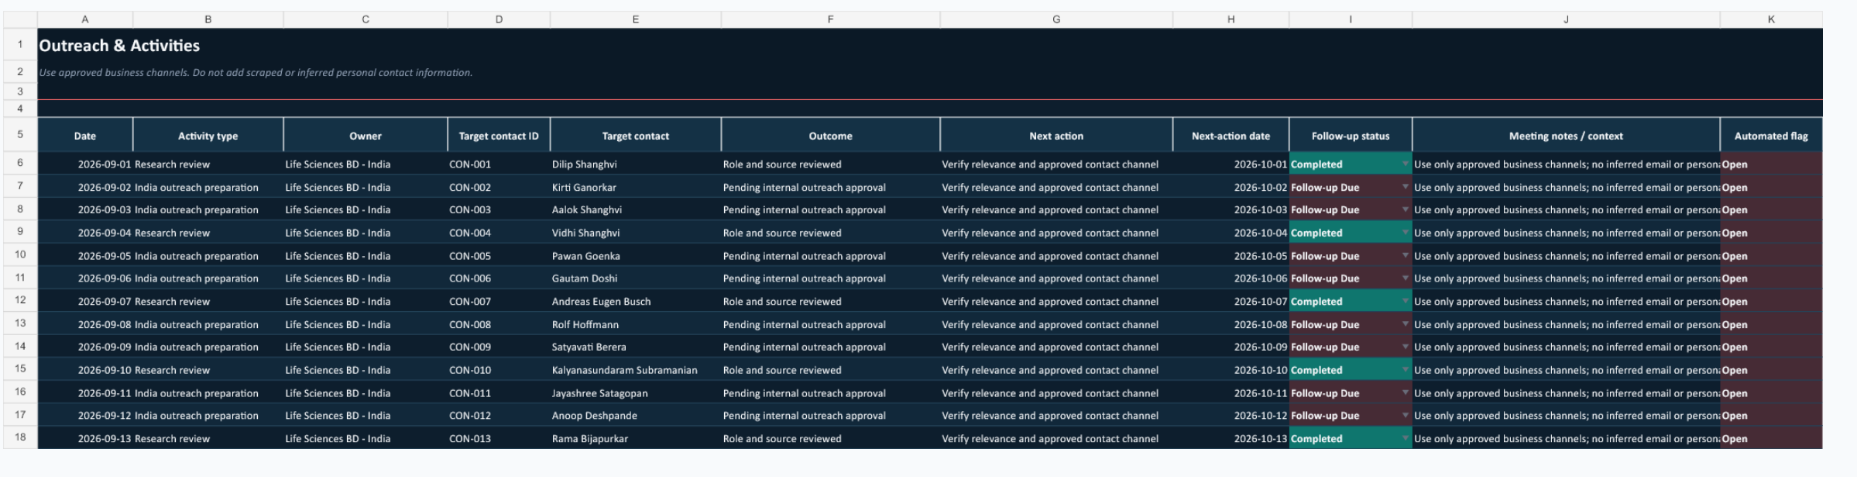
RISK AND DEPENDENCY
State what must be true: data access, clinical validation, integration feasibility, regulatory pathway, budget, internal champion, or procurement alignment.

OPPORTUNITY EXAMPLE
A Medical Affairs champion signals a need for evidence generation. Create an RWE opportunity, identify a technical evaluator who can validate data feasibility, assign an owner, list the data or governance dependency, and schedule a discovery action. Do not jump directly to a proposal.

06 / OUTREACH AND ACTIVITIES

Make each touchpoint change the record

The activity log is the operating memory. It captures what happened, whether the response advanced the relationship, a possible without a verbal briefing.



Outreach & Activities

Use approved business channels. Do not add scraped or inferred personal contact information.

Date	Activity type	Owner	Target contact ID	Target contact	Outcome	Next action	Next-action date	Follow-up status	Meeting notes / context	Automated flag
2026-09-01	Research review	Life Sciences BD - India	CON-001	Dilip Shanghvi	Role and source reviewed	Verify relevance and approved contact channel	2026-10-01	Completed	Use only approved business channels; no inferred email or person	Open

Outreach & Activities: date, type, owner, target, outcome, next action, date, meeting notes, follow-up status, and automated overdue flag.

AFTER EVERY MEANINGFUL INTERACTION
Log the outcome in plain language. What changed? Which assumption was validated or challenged? Which stakeholder is now relevant? What must happen next?

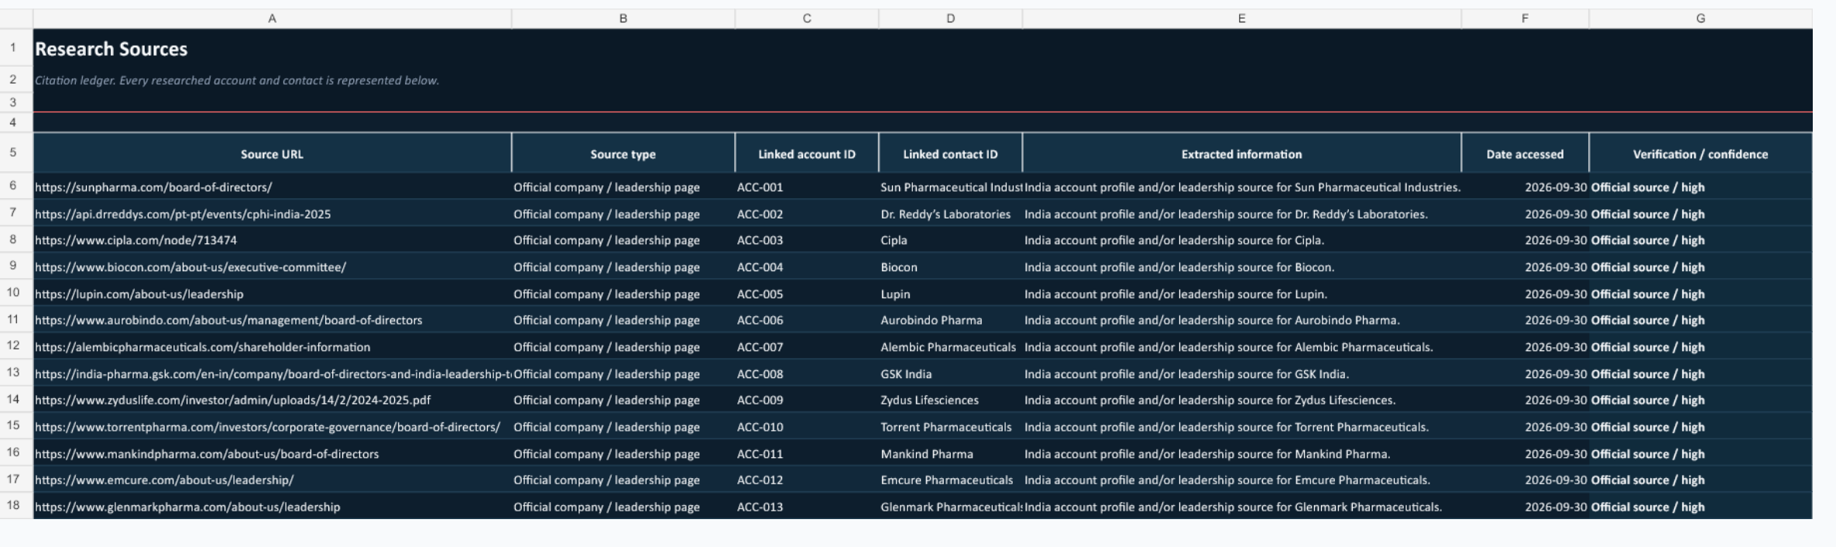
ONE NEXT ACTION, ONE DATE
A record with multiple vague next moves often has none. Choose the next best action, assign an owner, and set a date. Overdue flags are prompts to finish, reschedule, or close the loop.

OUTREACH EXAMPLE
For a verified VP of Medical Affairs: reference the specific evidence or RWE hypothesis; ask a short discovery question; log whether the person is a champion, evaluator, or neither; capture the outcome; then add a dated action such as "identify technical evaluator" or "refresh evidence source."

07 / RESEARCH SOURCES AND NEWS SIGNALS

Treat sources as the evidence layer

Every research-backed account or contact must point to a traceable public source. News is useful only when it changes



Research Sources

Citation ledger. Every researched account and contact is represented below.

Research Sources: source URL, type, linked company/contact, extracted detail, access date, verification, and confidence rating.

WHAT A GOOD SOURCE ROW CONTAINS
The exact public URL, source type, linked company or contact, the factual extract, access date, and a verification/confidence rating. This makes each record auditable.

CONVERT NEWS INTO AN ACTION
A clinical milestone, India expansion, diagnostic launch, digital-health partnership, or imaging initiative may be a useful signal. Capture the source, state the changed hypothesis, identify a relevant role, and create a dated research or outreach action.

EVIDENCE HIERARCHY
Strongest: company leadership page, annual report, press release, regulator filing, conference speaker profile, or explicitly published organizational contact page. Weak or incomplete source? Preserve it, mark the record unverified, and do not treat it as outreach-ready.

08 / OPERATING CADENCE

Keep the CRM current enough to trust

The value of the system comes from consistent small updates, not occasional bulk data entry.

DAILY - 10 MINUTES
Review overdue activities. Finish, reschedule, or close the loop. Log outcomes immediately after meaningful outreach or research.

WEEKLY - 30 MINUTES
Review Tier 1 coverage, high-score leads, stale sources, and opportunities stuck in Research. Assign one next move per priority account.

MONTHLY - 45 MINUTES
Check balance by sector and use case. Refresh assumptions, update account tiers, and agree sourcing priorities for the next cycle.

THE TEST OF A GOOD CRM RECORD

Can a teammate understand why the account matters, who matters, what evidence supports the view, what has happened, and exactly what should happen next? If not, the record is incomplete.
