Qure.ai CRM / FIRST-TIMER GUIDE

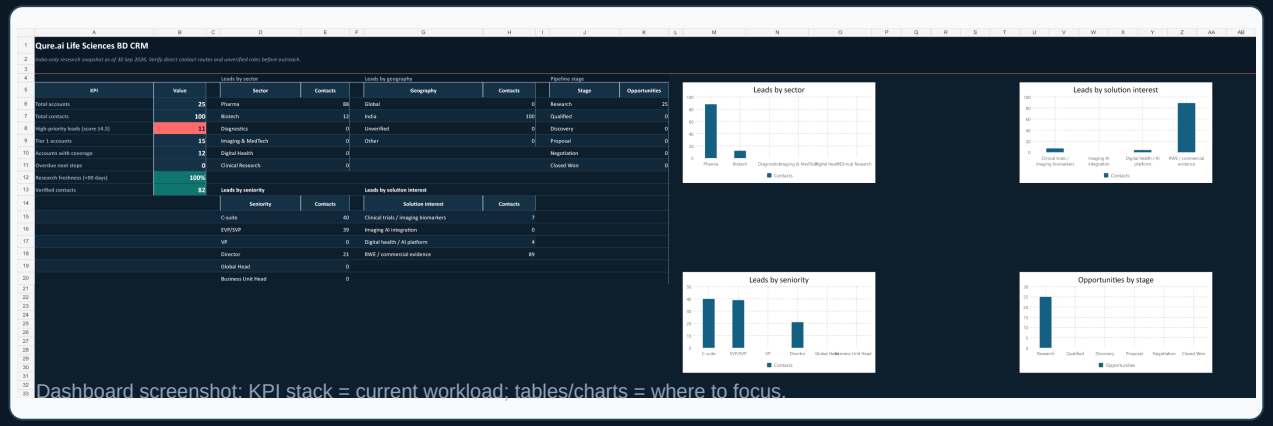

Turn India Life Sciences research into clear, compliant next steps.

Read the signals, pick one action, and keep the evidence trail current.

1. UNDERSTAND 2. DECIDE 3. ACT

1 Start on the Dashboard

Scan the KPI stack first, then use the breakdowns to find concentration, gaps, and urgent follow-up.

Dashboard screenshot: KPI stack = current workload; tables/charts = where to focus.

COVERAGE

15 Tier 1 accounts, but only 12 currently have contact coverage. Close

EVIDENCE

82 contacts are verified on official sources. Treat the remaining unverified

FOCUS

88 contacts are in pharma and 12 in biotech. If imaging/diagnostics is strategic, deliberately build that missing segment.

PRIORITY

Route lead scores of 4.5+ to a tailored message with one relevant Qure.ai use case and a single next action.

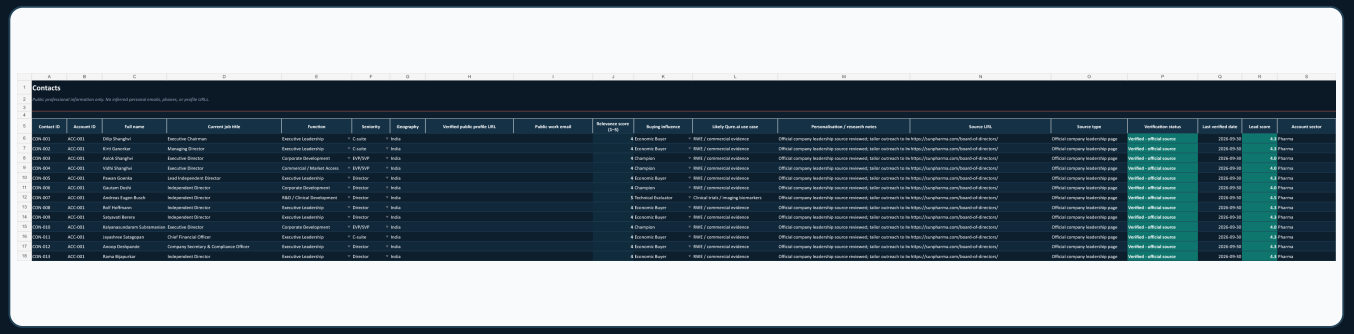

2 Use this 5-minute operating loop

01 FILTER — Tier 1 + high lead score

02 VERIFY — Title, source, and last verified date

03 QUALIFY — Use case + buying influence

04 ACT — Log one next action and deadline

THE SIGNAL KEY

- CORAL — Priority / unverified
- TEAL — Verified / progress
- SLATE — Context / source detail

NEXT MOVE

Verify source -> tailor one message -> set a next date.

CRM hygiene rule: every meaningful update needs a source, a verification status, an owner, and a next date.
